

ESAVB15C

Automatic Air Vent, Cylinder Style with 15mm Compression Fittings

- 15mm compression fittings
- Brass body
- Ensures efficient and automatic removal of air
- Saves time and money when installing a new heating system
- Prevents corrosion and problems with operation
- Easy to use and quick to install

Automatic Air Vent, Cylinder Style with 15mm Compression Fittings

The ESi Controls range of Automatic Air Vents are designed for heating systems and other closed circuit hot water systems which require the efficient, automatic removal of air when a system is filling with water. The ESAVB15C allows quick and easy removal of trapped air from sealed heating systems without draining down the system and reduces, and often eliminates, the need for bleeding.

The ESAVB15C is a cylinder-style Automatic Air Vent with 15mm compression fittings. It can be fitted anywhere in the positive pressure side of the system where air is likely to be trapped, although it should be installed in an accessible and visible area to ensure it can be serviced easily.

Technical Data

Automatic Air Vent	ESAVB15C
Connections	15mm Compression Fittings
Operating Temperature	110°C Maximum
Max Working Pressure	6 Bar
Valve Body Material	Brass
